

## Key API Endpoints

### Auth Controller

- `POST /api/auth/register` – Local signup
- `POST /api/auth/login` – Email/password login
- `GET /api/auth/oauth/callback` – OAuth login callback
- `POST /api/auth/refresh-token` – Refresh access token
- `POST /api/auth/logout` – Revoke refresh token

### User Controller

- `GET /api/users` – List all users (any role)
- `POST /api/users` – Create user (Admin only)
- `PUT /api/users/{id}` – Update user (Admin only)
- `DELETE /api/users/{id}` – Delete user (Admin only)

### Middleware/Guards

- `AuthorizeAttribute(Role = "Admin")` – Restrict access to Admins only
- `AuthorizeAttribute(Role = "User,Admin")` – Allow any logged-in user
